

Press Release September 2015

Barbados' tourism has been encouraging so far in 2015, with arrivals increasing by 14.5 percent to end-September. However, construction activity fell short of expectations, and the spillover effects to the retail and domestic services sectors were muted, resulting in growth of 0.3 percent for the year so far. Average unemployment over the first half of the year was 12 percent, and inflation, which is mainly imported, fell to 0.8 percent in the twelve months ending July.

The usage of foreign reserves has reverted to normal, since the end of 2013. High demand for foreign exchange, which led to the decline in reserves in the last seven months of 2013, was curtailed by the fiscal measures announced in August and December of that year. All through 2014, and so far in 2015, foreign reserves have remained around the one billion dollar mark. At the end of September, the international reserves stood at \$976 million, providing cover equivalent to about 14 weeks of imports of goods and services.

P - Provisional

Notes - Arrivals estimates generated by the Central Bank of Barbados using preliminary arrival data. Subject to change after official release from the Barbados Statistical Service.

A strength of Barbados' tourism is the diversity of countries from which we attract visitors. This year we have seen double-digit growth in every major market: the US, Canada, the UK and the Caribbean (Table 1).

Figure 2- Tourist Arrivals by Source Market, Jan-Sept 2015

With affordable photovoltaic systems now available, in widely interest distributed generation by homes and businesses has blossomed, and there is an estimated 8 megawatts of new capacity at different stages of installation. However, due to administrative issues, new installed capacity has only been 2.8 megawatts so far for the year, which brought the total distributed generation capacity to 9.2 megawatts at the end of September.

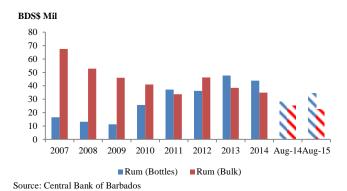

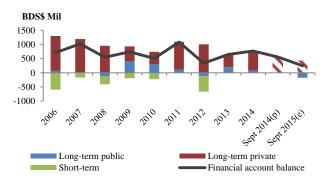

Figure 4 - Domestic Exports of Rum

Rum producers have had some success in expanding their production of high value-added branded rum, which is aged, blended, bottled and packaged in Barbados for export. Sales of such products continued to increase to August 2015, even as sales declined for bulk rum, which has struggled to remain competitive with oversubsidised products from the US Virgin Islands and Puerto Rico.

Source: Central Bank of Barbados

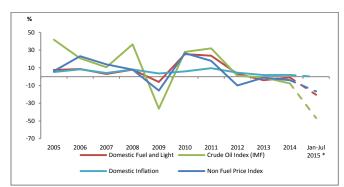

Net private capital inflows were estimated at \$417 million to September, versus \$542 million one year ago. Inflows for the purchase of second homes in Barbados picked up a little in 2014. The public sector recorded a net outflow of \$178 million, primarily because of significantly higher amortisation payments, and the payment of Government's equity subscription in the Andean Development Bank (CAF, for its initials in Spanish).

A \$144 million reduction in the fuel bill, which amounts to about 20 percent of annual imports, was the main reason for the small decline in foreign payments, compared with 2014. The volume of fuels imported was 8 percent higher, but the average price was 41 percent lower. Foreign income from services, including international business and financial services, has held steady since last year.

Figure 6 – Import Prices and Inflation

Source: IMF Commodity Prices and Barbados Statistical Service Note: 2015 Jan-Jul price changes

The dramatic fall in payments for imported fuel and lower commodity prices, have had a major impact on Barbados' inflation rate. On average, the costs of domestic electricity and fuel have declined 1 percent per year in the past three years, and by 20 percent during the first seven months of this year. Domestic food price inflation fell by 2 percent on average in the 12 months ending July 2015 from an average of 4 percent between 2011 and 2014, at the height of the world commodity boom.

The deficit over the first half of the Fiscal Year (April – September) was \$19 million less than for the same period last year. Revenue rose by \$50 million thanks mainly to property taxes, which were \$99 million higher. Receipts were especially high because of the rate increase in lieu of the now repealed municipal solid waste tax, and the fact that tax bills were distributed earlier than in 2014. Excise taxes rose by \$15 million, but receipts from the VAT fell \$22 million in part due to industrial action at the Bridgetown Port that delayed the clearing and processing merchandise imports.

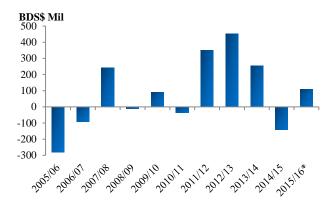

Total expenditure increased primarily because of an additional \$17 million in domestic interest payments and a \$20 million increase in transfers to public institutions. The tax changes being implemented are forecast to yield \$81 million in additional revenue in the second half of the fiscal year. Tight controls on Government's expenditure will be maintained, to stay on course for the fiscal year target deficit of 4 percent of GDP.

| | \$ Millions | % of GDP |
|--|----------------|-------------|

Table 3 – Fiscal Adjustment

Source: Central Bank of Barbados

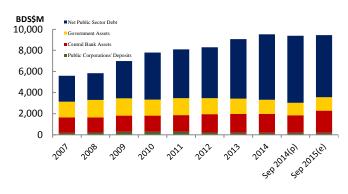

Source: Central Bank of Barbados Note: * Data to September

Commercial bank financing expanded by \$108 million for the fiscal year, up to September 2015. Banks' holdings of Government paper increased by almost \$1 billion between 2011 and 2013, and after a small cutback in 2014, their appetite for Government paper appears to be returning. Private individuals and companies subscribed \$82 million in Government securities, mainly Savings Bonds.

The Barbados Government's net indebtedness to the private sector at home and abroad continues on an upward trend, a reflection of the fact that the fiscal deficit continues to exceed the growth of GDP. The net public sector debt to GDP, which was no more than 28 percent in 2008, has now risen to 68 percent (Figure 8).

Figure 8 – Public Sector Debt

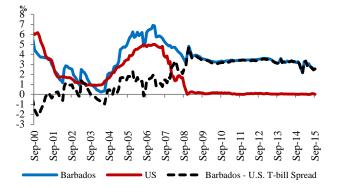

Source: Accountant General, Ministry of Finance, Central Bank of Barbados

The major burden of this debt is the interest cost, which absorbs 29 percent of all Government revenues. The premium on domestic Treasury bill rates is still very high, compared to US Treasury bill rates. Prior to 2008, the premium on Barbados T-bill rates was never more than two percentage points; since then, the spread has been in the region of three percentage points. As Government's deficit is reduced and arrears of payment are paid off, monetary intervention to reduce the excess interest burden will become more effective.

The Central Bank, the Treasury and the Ministry of Finance have upgraded Government's cash management procedures, with a view to eliminate arrears of payment, and progress has been made in this direction.

Outlook

The principal factors affecting the near-term growth outlook are the prospects for tourism and the implementation of major private and Government–funded investment projects. After the significant restoration of airlift capacity from North Atlantic markets last winter season, the growth in long-stay arrivals are expected to moderate. However, the cruise tourism business is expected to get a major boost from an expansion in the home-porting services at the Bridgetown Port.

Total investment in hotels currently scheduled to be under construction in 2016 amounts to over US\$500 million, to be spread over two to three years. In addition, the private sector is awaiting approval of other commercial investment projects estimated at about US\$50 million, and there are potentially more economically significant investments in alternative energy. Because these projects may save on fuel imports, they have the potential to multiply their impact on growth, in much the same way that tourism does.

The Barbados economy remains competitive, by international standards, and the quality of life remains high, making the country an attractive place to visit, retire and do business. In recent publications by international organisations, Barbados was ranked most competitive in the Caribbean in tourism¹ and most competitive in all of Latin America and the Caribbean in innovation.² The UNDP's *Human Development Report*, which is the best global indicator of quality of life, ranks Barbados second only to Bahamas in the Caribbean.³

The growth prospects depend heavily on the success of Government's medium-term programme for growth and fiscal adjustment. This strategy could reverse the slide in the country's international credit rating, once it features fiscal deficits that fall below the growth rate of GDP, to reduce debt levels and the burden of interest costs.

Over the years, a widening gap has opened up between labour costs and productivity in Barbados. A medium term strategy for closing this gap has to be placed high on the agenda for action by the Social Partnership.

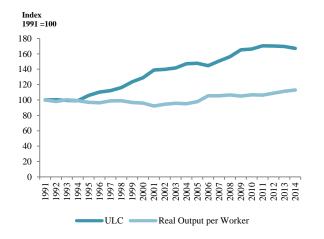

Figure 10 – Unit Labour Cost and Real Output Per Worker

Source: Central Bank of Barbados

The Central Bank's current projection for growth in 2015 is now 0.5 percent, mainly because of the delayed implementation of the previously highlighted investment projects. Assuming that these projects will now be underway next year, growth rises to about one percent in 2016 and two percent thereafter. It is possible to improve significantly on these forecasts. Factors that can make for much better performance include the improvement of administrative efficiency in the public service, initiatives to increase labour productivity and worker engagement, an aggressive policy of fiscal consolidation, more effective incentives and support for green energy and new and more appropriate financing of the development of the cultural and heritage sectors.
